

SEO AUDIT REPORT

memrynote.com

Privacy-first PKM desktop app - SaaS

June 17, 2026

SEO Health Score

48 / 100 - Needs Work

Solid technical foundation and a genuinely differentiated product, but near-zero search surface area. The site is one homepage competing in SERPs that reward comparison pages, with no content engine, weak structured data, and unoptimized asset delivery. The product's edge (E2E encryption + notes + tasks + calendar + journal, offline-first) is underserved in the market - the entire gap is distribution and search infrastructure, not product-market fit.

Method: 6 parallel specialist passes (technical, content, schema, performance, GEO/AI-search, search-experience) reconciled against direct HTTP probes. Weighted across 7 categories. No Google Search Console / CrUX field data connected - field CWV may differ.

1. Category Scorecard

Category	Weight	Score	Headline issue
Technical SEO	22%	61	Trailing-slash duplicate content; missing security headers
Content Quality	23%	45	No blog/content engine; thin vs category
On-Page SEO	20%	55	Missing meta description; poetic non-keyword H1
Schema / Structured Data	10%	34	No Organization/FAQPage/BreadcrumbList; no aggregateRating
Performance (CWV)	10%	38	2 MB JS bundle; PNG images, eager, no dimensions
AI Search Readiness	10%	37	No llms.txt; FAQ answers JS-only; no brand authority
Images	5%	40	PNG not WebP; no width/height (CLS)

Weighted aggregate: Technical 22% / Content 23% / On-Page 20% / Schema 10% / Performance 10% / AI Search 10% / Images 5% = 48/100.

2. Findings by Priority

Critical: 3 | High: 5 | Medium: 4 | Low: 4

CRITICAL No comparison / alternative pages

Invisible on every commercial query. 'Obsidian alternative', 'private Notion alternative', 'NotePlan alternative', 'encrypted notes app mac' all rank dedicated /x-alternative pages + listicles - memrynote appears in 0 of these SERPs.

Build /obsidian-alternative, /notion-alternative, /noteplan-alternative (NotePlan = closest feature match -> highest **Fix:** conversion). Single biggest growth lever.

CRITICAL Trailing-slash duplicate content

/features and /features/ both return 200, byte-identical (107,737b), no redirect. Every URL has an indexable twin.
vercel.json 308 redirect /:path+/ -> /:path+.

Fix:

CRITICAL No meta description anywhere

<meta name=description> is absent (only og:description exists). Google writes its own snippet -> lower CTR.

Add per-page descriptions. Homepage: 'End-to-end encrypted notes, tasks, and journal in one offline-first app. Local **Fix:** Markdown files, no account required.'

HIGH Schema gaps

SoftwareApplication lacks aggregateRating (no rich-result eligibility), downloadUrl, screenshot, featureList. No Organization node, no BreadcrumbList, no WebSite SearchAction.

Add Organization + expanded SoftwareApplication + per-page breadcrumb JSON-LD. Do NOT fabricate **Fix:** aggregateRating - add only after a real ProductHunt/App Store source.

HIGH**2 MB JS bundle, no code-splitting**

Single chunk bundles framer-motion, libsodium-sumo (~300 KB crypto lib on a marketing page), paddle, posthog.
Route-based manualChunks; lazy-load libsodium/paddle/posthog. Target main chunk <150 KB Brotli.

Fix:**HIGH****Images: PNG, eager, no dimensions**

1.27 MB of screenshots, no width/height (CLS risk), 4 of 5 eager-loaded.
WebP @80% (~65% smaller), add dims, loading=lazy on all but hero, fetchpriority=high on hero.

Fix:**HIGH****Security headers missing**

No CSP, no X-Content-Type-Options, no X-Frame-Options. HSTS lacks includeSubDomains; preload.
Add via vercel.json headers block.

Fix:**HIGH****No llms.txt + FAQ answers are JS-only**

AI engines (Perplexity/ChatGPT/AIO) can't see FAQ answers and have no site map for citation.
Ship llms.txt (draft ready) + FAQPage JSON-LD with full answer text (works even if accordion stays JS).

Fix:**MEDIUM****Zero long-term caching**

Every asset returns max-age=0, including content-hashed /assets/*.
immutable, max-age=31536000 for hashed assets; keep index.html revalidating.

Fix:**MEDIUM****Render-blocking external fonts**

Google Fonts + Fontshare both render-blocking; Fontshare has no preconnect; Geist and Inter overlap.
Self-host fonts; drop Geist or Inter.

Fix:**MEDIUM****Sitemap has no lastmod**

All 17 URLs carry only <loc>. Misses recrawl scheduling signal.
Stamp build-time lastmod, especially /changelog and /roadmap.

Fix:**MEDIUM****No distribution presence**

Absent from AlternativeTo, ProductHunt, Reddit/HN - the sources that rank in target SERPs.
Submit listings; Show HN; r/ObsidianMD, r/selfhosted, r/pkm.

Fix:**LOW****H1 split spans fuse in text extraction**

Renders as 'thoughts,beautifully' to crawlers/screen readers.
Add a space/​ between the two spans.

Fix:**LOW****twitter:site is personal handle**

@h4yfans, not a brand account.
Switch to a @memrynote brand handle when created.

Fix:**LOW****Time-sensitive download title**

/download/desktop title says 'Coming end of June' - will stale in SERPs.
Use evergreen title after launch.

Fix:**LOW****IndexNow key file missing**

No instant indexing for Bing/Yandex.
Add key file + ping on deploy (high value for changelog/roadmap).

Fix:

3. Prioritized Action Plan

Sequenced by dependency and ROI. The Phase 1-2 cluster (redirects, schema, llms.txt, alternative pages) has zero dependency on the performance work - ship it first; do not let a bundle refactor gate organic-traffic wins.

Phase 1 - This week (quick wins, ~1 day)

- vercel.json PR: trailing-slash 308 redirect + meta descriptions + security headers (CSP, X-Content-Type-Options, X-Frame-Options, HSTS preload).
- Ship llms.txt + FAQPage / Organization / expanded SoftwareApplication JSON-LD.
- Falsifiable: curl -I /features/ returns 308; Rich Results Test shows valid SoftwareApplication + FAQ.
- Leading indicator: GSC 'Duplicate without canonical' count drops; Perplexity cites memrynote for 'is memrynote free'.

Phase 2 - Next 2 weeks (the growth lever)

- Build 3 alternative pages: Obsidian, Notion, NotePlan (2,000-3,000 words each, feature-comparison table, Download CTA not waitlist).
- Submit to AlternativeTo + run one ProductHunt launch.
- Falsifiable: pages indexed in GSC and appearing top-50 for their head term within 4-6 weeks.
- Leading indicator: rising impressions for '* alternative' queries in GSC.

Phase 3 - Following sprint (performance, independent track)

- JS route-based code-splitting + lazy-load heavy libs.
- Convert screenshots to WebP, add width/height, lazy-load non-hero.
- Long-term caching headers on hashed assets.
- Falsifiable: PageSpeed mobile LCP moves from ~4s into <2.5s; CLS <0.1.

Generated by the claude-seo skill. Scores are diagnostic, derived from live HTTP probes and SERP analysis without Google Search Console / CrUX field data. Connect GSC for field CWV and real query/impression data.
